Let **MT**Vision
Show You The **MONEY!**

Visualize Success with *OmniTrader 2020!*

I often speak with successful traders who are willing to share their secrets of success. The consistent approach virtually all of them use is Multiple Timeframe Analysis. It's all about seeing the Big Picture. And that's what OmniTrader 2020 is all about.

OmniTrader 2020 is designed to help you see the market more clearly by illuminating the relationship between higher and lower timeframes in the chart you are trading. While we have always had the ability to tile multiple charts in different timeframes, the power of having this information in the chart you are trading cannot be overstated!

Clearly See the Market

Multiple Timeframe Indicators enable you to add key indicators on other timeframes. And because they are Dynamic the higher timeframe view always shows the latest information, regardless of which day of the week (or hour of the day) you happen to be looking at.

Additional tools make it easier than ever before to see this relationship, including Multiple Timeframe Color Charts and Quick Indicators that can display Dynamic Indicators in other Timeframes.

MTVision Makes it Even Clearer!

The NEW MTVision Plug-In is designed to collapse all this firepower down to a single indicator that you can add to any chart in a few clicks. MTVision is packed with information that makes it ultra easy to see pullbacks in trend, as well as strong trend-following moves.

We also include powerful Templates that are already configured, and education to help you get the most out of them.

MTVision is something you will definitely want to activate in your charts, and it's included in the OT 2020 Package.

Your No-Wait OmniTrader is Here.

Speed is a big deal. When you sit down to OmniTrader, the last thing you want to see is "Compiling, Compiling, Compiling." I asked our developers, "Isn't there a way to avoid this?" There was.

THE DIFFERENCE IS INCREDIBLE. Now, opening profiles and editing Strategies is actually FUN because the wait time has been dramatically reduced or eliminated. It took an overhaul of the OmniLanguage Engine, but it was worth it. And that's not all...

More Improvements Across the Board!

I have always felt there are certain things in OmniTrader that could just be better. I call them my "Pet Peeves". I looked through customer suggestions and added to the list and my developers delivered! We also improved the Charts, with enhanced Quick Indicators, Automatic Data Window movement and more. This is without a doubt the most robust and user-friendly OmniTrader ever!

OmniTrader 2020 is designed to perform. Add MTVision, and you have a formidable ally in your quest for trading profits that's guaranteed to make you smile! This is what you need to conquer the markets in 2020 – and beyond.

Sincerely,

Ed Downs

Like **X-RAY Vision** on the **Market**

OmniTrader 2020 makes it easy to SEE Confirmation across multiple timeframes. In this chart, the Daily/Weekly confirmed zones were perfect trend-following trades.

Seeing the Market with Multiple Timeframe Analysis

Successful traders agree that viewing charts in higher and/or lower timeframes than the one you are trading can provide valuable insights into the odds of a move from the current chart position.

We can always look at multiple charts to compare timeframes. But OmniTrader 2020 makes it so much easier with Multiple Timeframe Indicators.

In the above example, the Weekly and Daily Trend Intensity Index are both plotted in the Daily Chart. This makes it easy to see the relationship between the established long and short term trends.

Below these indicators is the new MTVision Plug-In, which condenses this same information into simple-to-read colored bands. See it in action on Page 6.

The Power of MT Analysis

Dynamic Bars

OmniTrader 2020 is the Only Software That Has It!

OmniTrader 2020 allows you to create Indicators based on other timeframes and symbols in your charts. When a higher timeframe indicator is plotted, you can ALSO specify that it is to be calculated as a Dynamic Indicator.

As shown in the example to the right, the standard Daily value is based on the previous session. Obviously, that means there is just one value for each day.

For Dynamic Daily, we calculate the prior day's bar on every 5 minute bar. This provides the benefit of the Daily view, with the additional benefit of capturing changes that happen in the CURRENT session!

Take another look at the charts on the right. On October 14th, Wal-Mart reverses trend and momentum and falls throughout the trading session. The top chart showing the Daily Indicator using the previous day's value is still showing rising momentum. But the bottom chart shows how the Dynamic Daily Indicator reacts to falling price and provides you with much more valuable information.

The benefit of this is clear when you calculate indicators dynamically. They show the effect of sudden price changes as new data is received without losing the benefit of the higher timeframe information.

Daily vs. Dynamic Daily

Plotting RSI(10) Daily on the 5 Minute chart of WalMart shows 3 values for the 3 days plotted (the prior closing day's value).

Here, we plot the Dynamic Daily on the 5 Minute, which changes on each 5-Minute bar. Obviously, much more reactive!

NEW!

Multiple Timeframe Indicators

The new Multiple Timeframe Indicators in OmniTrader 2020 opens up a world of possibilities.

Using the new MT OmniScript function in OmniTrader 2020, we can easily create an Indicator in the current timeframe based on any other indicator in another timeframe.

For example, to create a Dynamic Weekly RSI(10) to use in Daily Charts, that is simply created as:

MT(RSI(10),"W",1)

Our first application was to create Weekly OmniScans – a powerful addition that is churning out profitable candidates as described next!

A World of Possibilities!

Multiple Timeframe Indicators can be used anywhere OmniScript is supported, including...

- **OmniScan** (See “Top-Down Analysis” below)
- Trade Plan OmniScript Stop
- Color Charts
- OmniScript FL Column
- Quick Indicator
- OmniLanguage Indicators, Systems, etc.

How do “non-programmers” benefit? We have no doubt that those who are familiar with OmniScript and these applications will share their work in our forums, as they have been doing since the Forums were opened.

Top Down Analysis

Multiple Timeframe Indicators have made it possible to perform “Top-Down Analysis”, a powerful way to find the best possible Setups.

The DW Trending Scan finds those charts that have just started an uptrend in the Daily Chart when the Weekly Chart is also in an uptrend. Symbols you see in the Focus List will be trending up in BOTH the Daily and Weekly timeframes – the PERFECT SETUP.

Scans Included!

This is just one of the pre-defined Multiple Timeframe Scans we are including with the MTVision Plug-In. See page 10 for more details!

Find the Best Setups

Combining Weekly with Daily: The Trending Scan finds all charts where Weekly is trending up and Daily has just started trending up as shown in this example on ATO.

Let **MT** Vision

Want to Know When to Buy, Sell or Stand

MTVision INSTANTLY shows you which charts are likely to MOVE!

The MTVision (MTV) Plug-In leverages the Multiple Timeframe Indicator feature to create a powerful view of any market.

MTV displays a separate row for each timeframe in your profile, allowing you to immediately see a wealth of information in various timeframes. Confirm the trades that are poised to profit with a simple glance at the MTVision display.

MTVision also allows you to target any symbol. This means that you can instantly see things like the broad market momentum, industry group trend direction, or sector volatility.

It also allows you to plot multiple "MTV's" at the same time, so there is no limit to the amount of information that you can instantly see in order to confirm your trades. You could easily see trend AND momentum information at the same time.

And best of all, MTVision is able to draft off of Nirvana's proprietary Dynamic Timeframe technology, giving you a view of the market that is well beyond what is available in other software.

The power of MTVision is demonstrated in this chart on Conoco (COP). We ONLY want to Buy or Sell when the long term trend and short term trends align. There were several Buy Signals from April to September that aligned with the All Green display.

Show You The **MONEY!**

Aside? Here's How.

This was followed by a “zone of confusion” from October through March that was difficult to trade. Fortunately, MTVision helped us stand aside during this period. Then, as the stock declined from April through August, it was clear the Bears were in play, thanks to the All Red MTVision display.

Templates Included

We include several “canned” templates to make it easy to apply to your charts.

For example, the MTV Pullback in Trend Template shows you both the trend info and whether the security is overbought or oversold. The example shows an easily confirmed long signal with MTV that returned BIG profits!

Templates for Any Timeframe!

This is just one example of the templates provided in MTVision. We also include templates to help you confirm great trades in both End of Day and Real Time. Regardless of your trading timeframe, MTVision gives you templates to confirm the most profitable trades.

Never before has it been so easy to identify the best trades - and avoid the bad ones!

MTVision "Kills It" in Real Time.

The MTV shown here is on the 5, 15, and 60 minute charts. Why trade when the market is giving mixed signals? Just wait for confirmation in all three timeframes. It's easy with MTVision!

MORE to Like About OmniTrader 2020

(continued from page 5)

FINALLY - Smart Compiling! by Barry Cohen, QA Department

It's About Saving Time.

As head of the QA Department at Nirvana, the most frustrating thing I have wished could be changed is OmniTrader constantly compiling files.

In fact, there are many cases where OmniTrader will compile EVERYTHING. (With an endless "Compiling.. Compiling.. Compiling.." showing at the bottom.)

I have great news! Compiling now only occurs when it needs to on an individual file basis. If OmniTrader detects that a new file is installed or has been modified, it knows to compile only what's needed. This improves speed in many areas including Startup!

And, when you click "Compile" in OmniLanguage it ONLY compiles what has changed! For many users this single improvement can save HOURS!

Here's another example: Let's say your friend gives you an OmniLanguage indicator, but it has a typo in it. This would typically cause all your OmniLanguage projects to no longer work. But no more!

Smart Compiling ensures that failed OmniLanguage files don't affect other projects! In fact, it will continue to use the last successful compiled version!

From 20 Seconds down to 2!

Nirvana Club Members – prepare to smile! Working with GA strategies is now an order of magnitude faster. Opening and exiting an ARM6 Strategy used to take approximately 20 seconds. In OmniTrader 2020 that same strategy opens in 2 seconds!

Thank you developers!

Ed's "Pet Peeves"

Important Improvements every OT User will appreciate!

I've been an OmniTrader user for 26 years. Like you, I have noticed behaviors here and there that I knew could be improved to make trading easier. I call them my "OmniTrader Pet Peeves!" See if you recognize any of these...

Sorting the Systems Block

When you double-click the Systems Block in a Strategy, it comes up sorted alphabetically. But what you want to see at the top are the enabled Systems. So, the initial sort is now by the Enabled column.

| Enable | Force | Optimi | System / | Description |
|-------------------------------------|--------------------------|-------------------------------------|------------------------------|------------------------------|
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | ADX-B | Average Directional Movement |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | GAP-B | Gap Breakout |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | MFR-B | Money Flow RSI Breakout |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | RWI-B | Random Walk Index |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | TLN-BL | Long Term Trend Line Breaks |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | TLN-BM | Medium Term Trend Line Brea |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | TLN-BS | Short Term Trend Line Breaks |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | VAP-B | Volume Accumulation Percent |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | VTY-B | Volatility Breakout |
| <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | Adaptive Average Directional | |

Finding Systems in Chart Options

This Systems tab was automatically sorted on the "short" System Names, like "RSI-C" but only the full name was visible. We now sort on the full name so you (and I) can more easily find a System in the list.

Important Chart Improvements

Indicators Behind Price bars!

Indicators can now display BEHIND the Price Bars so the price action is not obscured.

Move the Data Window!

Data value window does not obscure prices or indicator values. (See chart.)

Change it!

Width on Volume Bars, Bar Charts, and Line Charts is adjustable in Chart Options.

Quick Indicators!

When multiple Quick Indicators are deleted from a chart, they are also deleted from the Program. When you double-click a Quick Indicator plot, you can change line style and color.

Indicator values are now above the date window. Volume bars can be adjusted.

POWER Your Trading with MTC Seminar

by Jeff Drake Director of Trading Technologies

The OmniTrader 2020 Upgrade package is packed with powerful Multiple Timeframe Confirmation (MTC) Features, and we want to be sure that you can take full advantage of every one of them.

Power Your Trading with MTC is a comprehensive seminar to help you harness the profit potential of MTC. Jeff Drake will begin by looking at how other traders use MTC to consistently profit. He then looks at the BIG advantage that only OmniTrader 2020 users have – Dynamic MTC indicators.

After covering the additional MTC features in OT 2020, Jeff turns his focus to MTVision. This powerful new Plug-in for OmniTrader and VisualTrader shows a wealth of information in various timeframes.

Our complete look at MTVision includes explaining all of the settings available, the MTV Templates included, how to create your own MTVisions, and even how to use MTV to create your own indicators.

Power Your Trading with MTC is a road map to success with all of incredible new MTC features and MTVision, and it's yours when you purchase the OmniTrader 2020 Upgrade Package.

Key Seminar Topics:

- Understanding Multiple Timeframe Analysis
- The Noise Reduction Affect
- Profiting with Dynamic MTC
- Introduction to MTVision
- Exploring the MTVision Templates
- Combining MTVisions for Success
- Creating Custom MTVisions
- Making Indicators with MTVision

Included with MTVision: Templates & Scans

Scans & Templates

Provide Pre-Confirmed Candidates From the Entire Market - Right in Your Charts!

When you purchase the OmniTrader 2020 Upgrade Package, we will include special **OmniScans** designed to find:

1. Pull-Backs in Trend
2. Momentum Setup
3. Bullish/Bearish Strong Trend

Once OmniScan identifies the best list each day, Chart Templates help you see precisely when to act. It's an incredibly easy-to-use combination for profits and the PERFECT companion to MTVision!

Visualize Success with *OmniTrader 2020* Order by November 4th and Save!

***OmniTrader 2020 Upgrade*..... \$199**

Reg. \$249

The OmniTrader 2020 upgrade was designed from the bottom up to help you see the market more clearly. Dynamic Multiple Timeframe Indicators make it possible to see movement much more quickly than with traditional indicators. There are also numerous improvements that I personally requested. OT 2020 is awesome!

NEW *MTVision* Plug-in

MTVision makes profitable trading almost too easy. This simple display will show you the perfect time to act. How can something so simple yield such an advantage? Simple is better. Get the OmniTrader 2020 package and experience the power of MTVision.
